

## Guideline and Product quick selection

HFO-Blend R452A

R404A, R507 are the most commonly used refrigerant in low temperatures refrigeration systems. However, established F-Gas regulation leads the use of refrigerants with low GWP as long term solution.

HFO pure and HFO blends with very low GWP are considered as long term refrigerants and viable alternative to natural flammable Hydro Carbon or high pressure CO<sub>2</sub> where the application of natural refrigerants is not favorable.

This short document deals with R452A and it is an extension to previous 2016 HFO/HFO-blends product guide covered R450A, R513A, R448A, R449A and R1234ze. It is intended to provide nominal and extended capacities as well as technical information only related to R452A. All other technical data, features and part code numbers of products can be found in 2016 HFO/HFO-blends product guide.

### General Information

Technical data provided herein is collected with scrutiny. However, errors and misprinting remain reserved. The technical data is presented for informational purposes only and they are not to be construed as warranties or guarantees, express or implied, regarding the products or services described or their use or applicability.

Technical data may be updated; should you require confirmation with respect to a specific value, please contact Emerson Climate Technologies GmbH and clearly state the information you require.

Emerson Climate Technologies GmbH and/or its affiliates (collectively "Emerson") shall not be liable for errors in the stated capacities, dimensions, etc., as well as typographic errors. Products, specifications, designs and technical data contained in this document are subject to modification by us without prior notice. Illustrations are not binding.

Emerson does not assume responsibility for the selection, use or maintenance of any product. Responsibility for proper selection, use and maintenance of any product remains solely with the purchaser and end-user.

The information given herein is based on data and tests which Emerson Climate Technologies GmbH believes to be reliable. Such information is intended for use by individuals having the appropriate technical knowledge and skills, at their own discretion and risk. Our products are designed and adapted for stationary application. When using our products in mobile applications, our products might fail. The suitability for such mobile applications has to be assured by the plant manufacturer; for this purpose, appropriate tests might be necessary.

## Introduction and General Information

### Introduction

R452A belongs to group of HFO-blends with lower GWP compare to R404A/R507. Emerson released Alco products in 2016 for five HFO/HFO-blends refrigerants (R450A, R513A, R448A, R449A and R1234ze).

All products for R404A/R507 have been qualified also for use with R452A.

Refrigerant	Composition			Safety classification	Interim Replacement for
	R1234yf	R32	R125		
R452A	30%	11%	59%	A1	R404A, R507, R407A, R407F

### Capacity changes

Following table indicates the capacity comparison of expansion valves and solenoid valves in relation to R404A and R452A. For retrofit purposes, it is more important to consider readjusting of expansion valves.

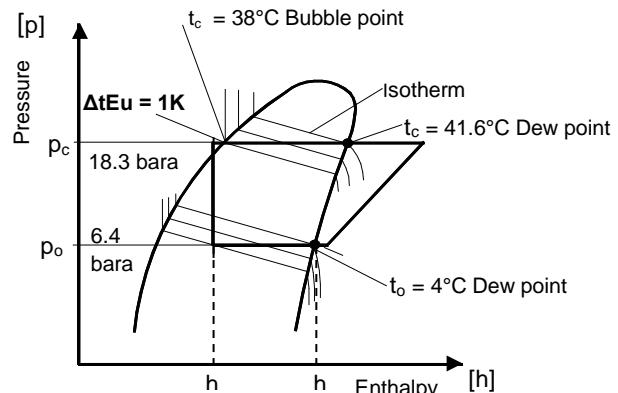

Condensing temperature	30°C						40°C						50°C					
	-40	-30	-20	-10	0	10	-40	-30	-20	-10	0	10	-40	-30	-20	-10	0	10
<b>Expansion valve and solenoid valve capacity change from R404A to R452A</b>																		
R452A versus R404A	4.8%	5.2%	5.9%	6.8%	8.4%	5.5%	5.8%	6.3%	6.9%	7.9%	7.1%	7.2%	7.4%	7.8%	8.4%	4.8%	5.2%	5.9%

Note: Please see section Thermo™-Expansion Valves for detailed information and guideline for readjustment.

### Dimensioning of Thermo™-Expansion Valves for systems with refrigerant having temperature glide

As opposed to single substances (e.g. R134a) where the phase change takes place at a constant temperature/pressure the evaporation and condensation of zeotropic blends are in a "gliding" form (e.g. at a constant pressure the temperature varies within a certain range) through evaporators and condensers. R452A is zeotropic blend.

The condensing /evaporating pressure must be determined at saturated temperatures (bubble for liquid / dew points for vapor) for dimensioning of the expansion valves, solenoid valves etc. The corresponding dew point for liquid pressures is provided in case of compressor selection based on dew point of liquid pressure.

### R452A Glide

Temperature (°C)	-40	-30	-20	-10	0	10	20	30	40	50
Dew point pressure (bara)	1.2	1.8	2.8	4.0	5.6	7.7	10.3	13.5	17.5	22.4
Bubble point pressure (bara)	1.4	2.2	3.2	4.6	6.4	8.7	11.5	15.0	19.1	24.1

### Subcooling

Subcooling generally increases the capacity of a refrigeration system and may be accounted for when dimensioning an expansion valve by applying the correction factor  $K_t$ . The capacity corrections for evaporating temperature, condensing temperature and subcooling are all incorporated in  $K_t$ . These are in particular the liquid density upstream from the expansion valve, the different enthalpies of liquid and vapor phase refrigerants as well as certain part of flash gas after expansion. The percentage of flash gas differs with various refrigerants and depends on system conditions.

Heavy subcooling results in very small flash gas amounts and

therefore **increases expansion valve capacities**. These conditions are not covered. Likewise, small flash gas amounts lead to reduced evaporator capacities and may result in substantial discrepancies between the capacities of the Thermo™-Expansion Valve and the evaporator. These effects must be considered during component selection when designing refrigeration circuits.

Quick selection tables are for very small amount of subcooling. For larger subcooling than 5K, please use the following correction factors:

Liquid Subcooling	10 K	20 K	30 K	40 K
Correction factor	0.9	0.8	0.7	0.6

## EX2 Pulse Modulated Electronic Expansion Valve

**EX2** Series is an electronically controlled expansion device. The capacity is defined through pulse width modulation. The primary application is for display cases and small cold rooms in commercial refrigeration such as supermarkets.

### Features

- Pulse width modulated
- Utilizing standard coils ASC 24VAC/ 50 Hz or ASC 230VAC/ 50 Hz (to be ordered separately)
- Shut off function eliminates the necessity of a separate solenoid valve
- Dampened plunger reduces noise and effects of water hammer
- One valve body can be combined with 6 orifices to make 7 capacity ranges up to 13 kW
- Available with ODF connections
- Long lifetime, high reliability

**EX2**

### Selection table

Type	Part No.	Description	Capacity $Q_n$ at 100% Open Valve (kW)* R452A
<b>EX2-M00</b>	<b>801091</b>	Valve less orifice 10 mm x 12 mm	
<b>EX2-I00</b>	<b>801090</b>	Valve less orifice 3/8"x / 1/2"	13
<b>EXO-004</b>	<b>801089</b>	Orifice 4	8.3
<b>EXO-003</b>	<b>801088</b>	Orifice 3	5.5
<b>EXO-002</b>	<b>801087</b>	Orifice 2	3.3
<b>EXO-001</b>	<b>801086</b>	Orifice 1	2.4
<b>EXO-000</b>	<b>801085</b>	Orifice 0	1.2
<b>EXO-00X</b>	<b>801084</b>	Orifice X	0.7
<b>ASC 24V</b>	<b>801062</b>	Coil ASC 24 VAC / 50 Hz	
<b>ASC 230V</b>	<b>801064</b>	Coil ASC 230 VAC / 50 Hz	

Note1: \*) Orifice should be selected at maximum 80% of  $Q_n$  to allow covering the load fluctuation.

Note2: Nominal operating condition: +4°C evaporating temperature, +38°C bubble / +41.6°C dew condensing temperature and 1 K subcooling.

## EX2 Pulse Modulated Electronic Expansion Valve

## Electrical Control Valves EX4-8

EMERSON EX4-8 are stepper motor driven valves for precise control of refrigerant mass flow in air conditioning, refrigeration, heat pumps, close control and industrial process cooling applications.

The Electrical Control Valves can be used as thermo-expansion duty, liquid injection duty, hot gas bypass, evaporator pressure regulator, crankcase pressure regulator, head pressure regulator or liquid level control.

### Features

- Multifunction as expansion valves, hot gas bypass, suction gas throttling, head pressure, liquid level actuator etc.
- Fully hermetic design
- Short opening and closing time
- Very fast full stroke time
- Positive shut-off function to eliminate the use of an additional solenoid valve
- Linear flow capacity
- Extremely wide capacity range (5...100%)
- Ceramic slide and port for accurate flow and minimal wear
- Corrosion resistant stainless steel body and connections

**Selection table / Nominal capacities as expansion valves and liquid injection valves (5% ... 100%)**

Type	Part No.	Flow pattern	Nominal capacity (kW), R452A	Inlet connection	Outlet connection	Electrical connector
EX4-I21	800615	Uni-flow	12.5	3/8" ODF	5/8" ODF	M12 plug
EX4-M21	800616			10 mm ODF	16 mm ODF	
EX5-U21	800618		38	5/8" (16 mm) ODF	7/8" (22 mm) ODF	
EX6-I21	800620		91	7/8" ODF	1-1/8" ODF	
EX6-M21	800621			22 mm ODF	28 mm ODF	
EX7-I21	800624		250	1-1/8" ODF	1-3/8" ODF	
EX7-M21	800625			28 mm ODF	35 mm ODF	
EX8-M21	800629		666	42 mm ODF	42 mm ODF	
EX8-U21	800630			1-3/8" (35 mm) ODF	1-3/8" (35 mm) ODF	
EX8-I21	800631			1-5/8" ODF	1-5/8" ODF	

Note1: Nominal operating condition: +4°C evaporating temperature, +38°C bubble / +41.6°C dew condensing temperature and 1 K subcooling.

### Recommendation to use EX4-8 with EC3-X32/33 and EXD-SH1/2 drivers/controllers in conjunction with R452A

Current software of drivers/controllers supports 16 different refrigerants: R22, R23, R124, R134a, R404A, R407A, R407C, R407F, R410A, R448A, R449A, R450A, R507, R513A, R744, R1234ze. It is possible to use these drivers with R452A with following considerations:

- R404A shall be selected from available refrigerants in menu of parameter related to the refrigerant type
- Set superheat setting 2.5 K higher than design/desired set-point. For example: set superheat setting at 9.5 K in order driver to control superheat at 7 K regardless of other operating conditions.

#### Note:

- Superheat value in display is 2.5 K higher than real superheat at outlet of evaporator
- Evaporating temperature value in display is 2.5 K lower than real evaporating temperature of system

#### Example: System with R452A

##### Design conditions:

- Refrigerant: R452A
- Evaporating temperature: -35°C
- Evaporating pressure would be 1.5 bara according R452A
- Desired superheat: 6K

##### Setting of controllers before Startup:

- Select Refrigerant R404A
- Set Superheat at 8.5K

##### Result:

Parameter	Display value	Operational value
Evaporating temperature	-37.5°C	-35°C
Evaporating pressure	1.5 bara	1.5 bara
Superheat	8.5 K	6 K

## TI Series - Thermo™-Expansion Valves

EMERSON TI series of Thermo™-Expansion Valves with interchangeable orifices are designed for refrigeration applications.

### Features

- Eight interchangeable orifice assemblies provide a capacity range from 0.4...14.8 kW
- 45 bar maximum working pressure allows the use of high pressure refrigerants
- Three styles of connections:
  - TIE: Stainless steel brazed fittings eliminate the need of wet rags during brazing
  - TIS(E): Copper brazed fittings (valve requires wet rag during brazing)
  - TI(E): Flare
- Cleanable / exchangeable inlet strainer in orifice assembly
- Constant superheat across a wide application range
- Large diaphragm eliminates disturbances to the valve and provides smoother and consistent valve control
- Laser welded stainless steel power element
- Internal or external equalizer
- Inlet brazing adapter
- Adjustable static superheat
- Special setting upon request an minimum 100 pieces order quantity

### Selection table

Orifice type	Part No.	Nominal capacity of orifices (kW) R452A
TIO-00X	800532	0.4
TIO-000	800533	1.0
TIO-001	800534	2.4
TIO-002	800535	4.0
TIO-003	800536	6.4
TIO-004	800537	10.5
TIO-005	800538	12.8
TIO-006	800539	14.8

### Note:

Nominal operating conditions:  
+4°C evaporating temp.,  
+38°C bubble / +41.6°C dew condensing temperature and  
1 K subcooling.

The following table/graphic is a guideline for readjustment:

Evaporating temperature (°C)	TI...-SW... Number of turn
-40	+3/4
-30	+1
-20	+1-1/3
-10	+1-3/4
0	+2-1/4
5	+2-1/3

### Note:

Number of turns in direction of clockwise as positive number and in direction of counter-clockwise as negative number.

## Thermo™-Expansion Valves T-Series

EMERSON Take-apart Thermo™-Expansion Valves are designed for air conditioning, chillers, rooftops, close control, A/C transportation, heat pumps, industrial cooling process, refrigeration and numerous special applications. The take-apart expansion valves are ideal for those applications requiring flexibility in selection of capacity and excellent stable superheat control under varying operating conditions such as high and low head pressure, wide load variation and partial load down to 10%. Valves with XB power elements can be applied in systems with Copeland Digital Scroll™ Compressors.

### Features

- Take-apart design consists of power element, cage and flange
- Large diaphragm eliminates disturbances to the valve and provides smoother and consistent valve control over wide range of operation
- Constant superheat across a wide application range

## 2-Way Solenoid Valves Series

### Features

- Normally closed
- Pilot operated requires minimum operating pressure differential
- Compact size
- Extended fittings: No disassembly necessary for brazing
- Coil in 24VAC/50 Hz and 230VAC/50 Hz available

**200RB**

**240RA + ASC**

### Nominal Capacity Data

Type	Kv (m³/h)	ΔP <sub>min</sub> (bar)	Nominal capacity for Liquid line (kW), R452A
<b>110RB2</b>	0.2	0	2.9
<b>200RB3</b>	0.4	0.05	5.4
<b>200RB4</b>	0.9		12.7
<b>200RB6</b>	1.6		22.3
<b>240RA8</b>	2.3		30
<b>240RA9</b>	4.8		62
<b>240RA12</b>	5.4		70
<b>240RA16</b>	8.8		114
<b>240RA20</b>	12.8		166

Note: Nominal operating condition: +4°C evaporating temperature. +38°C bubble / +41.6°C dew condensing temperature, 1 K subcooling and 0.15 bar pressure drop.

## 2-Way Solenoid Valves Series

Liquid line solenoid valve: Quick selection (at 0.15 bar pressure drop)
